01 INTRODUCTION

Brand guidelines

Logo artwork, layout rules and production notes for the website and everyday materials.

The identity

AGAI uses a gold-edged shield, a running figure and a leaf with a blue wordmark and green descriptor. These elements stay together in the approved full-logo layouts.

Use this guide to choose an asset, set its size and spacing, and carry the same colors and typography into new materials. Website and print examples show placement; they do not add services or contact details to the brand.

02 Logo versions

04 Color

05 Typography and writing

06 Website

07 Print and images

08 Files and production

Stacked signature

02 LOGO VERSIONS

Choose the format for the space.

The full signatures carry the centre name. The shield is a compact identifier, used with context.

Horizontal signature

Use for wide placements: desktop website mastheads, letterheads, landscape documents and signs. Keep the shield, wordmark and descriptor in their supplied relationship.

Screen: 400 px minimum canvas width

Stacked signature

Use for portrait layouts, document covers and larger centered placements. Keep the descriptor readable.

Screen: 320 px minimum

Shield emblem

Use for avatars and compact navigation. Pair with readable centre-name text when the name is not established.

Screen: 48 px minimum

03 SPACE AND SIZE

Protect the detail and the lettering.

Measure clear space from the visible artwork. The deployment exports include the required padding.

Dashed edge: minimum clear-space boundary

Clear space: x = H / 10

H is the height of the gold shield. Leave at least one tenth of H around every outer edge, including the descriptor and its side rules.

The exact master files retain their original canvases. Add this margin in the layout when using a master.

Asset	Screen width	Print width	Typical placement
Stacked signature	320 px	70 mm	Portrait / centered
Horizontal signature	400 px	100 mm	Wide / landscape
Shield emblem	48 px	12 mm	Compact / avatar

Use the supplied favicon files for the 16-48 px browser-tab exception. Below the full-logo minimum, switch to the shield with readable name text; do not squeeze or crop the full signature.

04 COLOR

Use blue and green as the anchors.

The logo colors remain fixed. Flat gold, lime and neutrals support layouts outside the artwork.

Blue

#0558AD

RGB 5,88,173

Primary actions / links

Green

#007C2C

RGB 0,124,44

Secondary emphasis

Gold

#DCA51E

RGB 220,165,30

Small accents only

Lime

#87DD00

RGB 135,221,0

Small highlights only

Working neutrals

Ink	#153B35
Muted	#526762
White	#FFFFFF
Surface	#F3F8F5

Text and background pairings

White on blue	**6.99:1**
White on green	**5.36:1**
Ink on white	**12.29:1**
Ink on gold / lime	**5.53:1 / 7.24:1**

Use ink text on gold and lime. Avoid white text on these accents. Keep status labels visible as words or icons as well as color.

Contrast reference: W3C WCAG 2.2, SC 1.4.3. Ratios calculated from the stated HEX values.

05 TYPOGRAPHY AND WRITING

Inter for everything outside the logo.

The custom wordmark remains artwork. Use the included typeface for readable page content and documents.

Your first appointment

Bring any relevant reports to your appointment. Contact the centre if you need help with the booking details.

Example wording - check against the centre's process.

Weights and case

Use regular 400 for body copy, semibold 600 for controls and bold 700 for headings. Use sentence case. Leave capitals and lettering inside the logo unchanged.

Reading and emphasis

Keep text columns to about 60-70 characters. Use bold sparingly. Keep links blue and underlined; avoid tracking or all capitals in paragraphs.

Style	Size	Weight / line height	Use
Main heading	56 / 36 px	700 / 1.1	Desktop / mobile
Section heading	36 / 28 px	700 / 1.2	Desktop / mobile
Body copy	16 px	400 / 1.6	Reading text
Controls	16 px	600 / 1.25	Buttons and labels
Captions	14 px	400 / 1.5	Supporting text

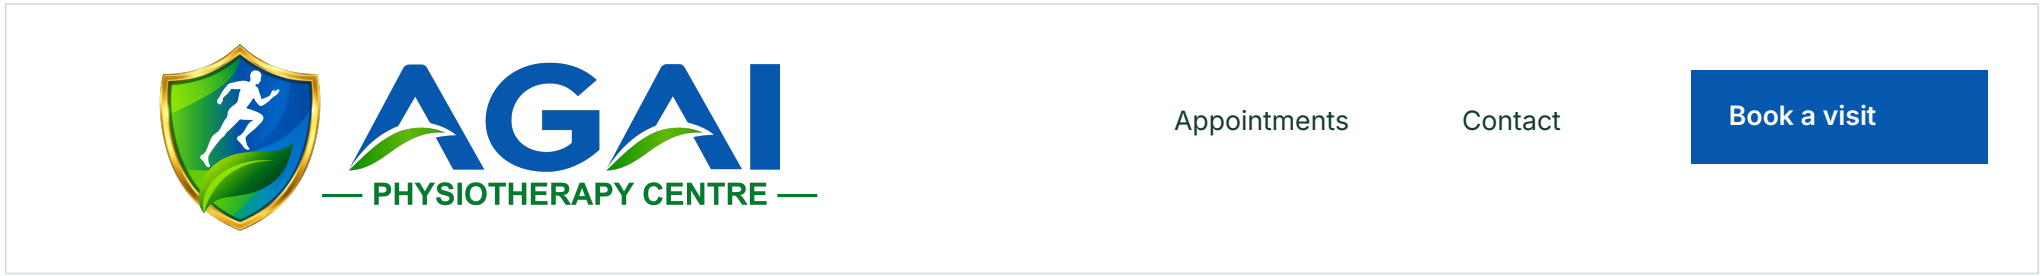

Use the full centre name on first mention. Give a specific next step; avoid unverified claims and recovery guarantees.

Inter: rsms.me/inter. Variable web and desktop files supplied with the SIL Open Font License.

06 WEBSITE

Use the horizontal signature at full size.

A wide header can carry the full name. Switch to the emblem and live text when the lettering would become too small.

Desktop header example, shown at reduced scale

Narrow header: shield plus separate readable text

Layout

1120 px maximum content width; 32 px desktop and 20 px mobile gutters. Use an 8 px spacing rhythm. Keep the logo separate from navigation.

Interaction

48 px minimum control height, visible keyboard focus and persistent form labels. Choose one main action per section.

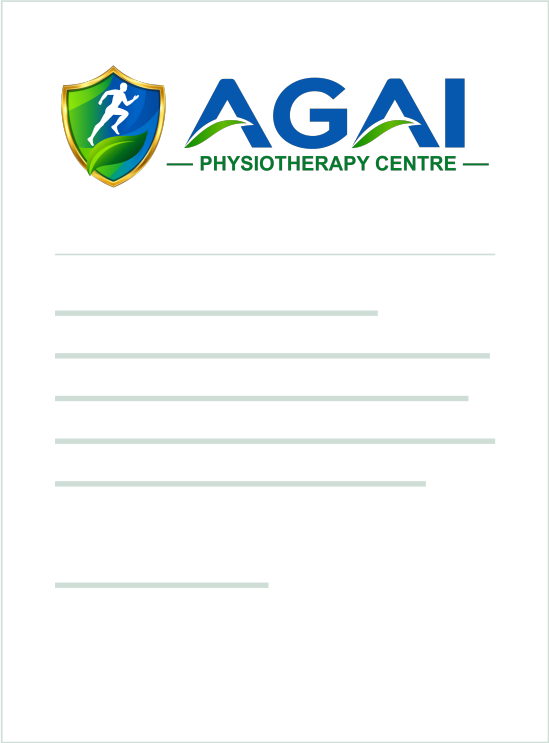

Use transparent WebP for compact website images and SVG where vector scaling is useful. Preserve aspect ratio with height:auto. Add descriptive alt text to a standalone logo, or alt="" when the adjacent name already identifies it.

Navigation and booking labels above are layout examples; connect only to real pages and working actions.

07 PRINT AND IMAGES

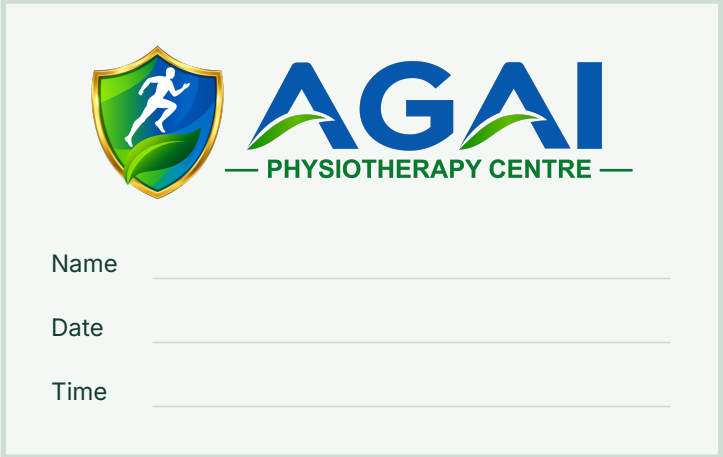

Keep practical information outside the logo.

Use the same identity on stationery and sharing images. Add verified contact details as separate readable text.

A4 letterhead

20 mm margins. Horizontal logo at least 100 mm wide.

A6 appointment card

12 mm margins. Leave generous writing space. Keep booking and practitioner details separate from the logo.

Profile images

Use the supplied square avatar. Keep the shield clear of corners for services that crop images into a circle.

Use real, consented photography of the premises and care setting. Keep text beside photographs or on a quiet panel. For print, supply SVG and request a proof for the intended paper and color profile.

Stationery shown as layout examples; not finished print templates. Supplied assets use RGB color.

08 FILES AND PRODUCTION

Choose the file for the job.

Exact masters are kept alongside separate exports. Original source files remain unchanged.

Type	Files / widths in pixels	Use
Master SVG	agai-master.svg / agai-horizontal-master.svg	Retain with the job; original source artwork
Deployment SVG	agai-logo.svg / agai-horizontal.svg	Padded canvas; scalable website or layout use
Transparent PNG	Stacked 1280/2560; horizontal 1600/3200	Documents and tools without SVG support
Lossless WebP	Stacked 640/1280; horizontal 800/1600	Efficient website image assets
Shield and icons	Emblem, avatar, favicon, Apple icon	Compact identity and browser/app surfaces
Styles and fonts	brand.css / tokens.json / Inter files	Reusable web styles and local typeface

Before publishing

Check the logo at its actual size, preserve clear space, verify links and contact details, test keyboard focus and narrow layouts, and keep both master files with the project.

Before printing

Use a vector master where supported. Confirm final dimensions and paper. Ask the printer for a color proof; do not assign a single CMYK or Pantone value to the gold gradient.

Implementation examples and source links: README.txt. Asset provenance and checksums: manifest.json.
